Klee Product Key is a MIDI-enabled software recreation of the electro-music.com hardware Klee step sequencer developed with the input of the sequencer's creators! It includes preserts and custom note ranges. There are 100 presets available, grouped in 10 erasable sets, each with it's own customizable features: * 50 randomly generated sequences; * 10 envelope curves; * 20 random or preset patterns; * 10 random or preset sounds; * 20 presets for sequencing steps; * 20 additional random or preset sequences; * 10 presets for creating step and note sequences; * 10 presets for making "glitchy" sequences; *

10 presets for creating basic beats. Klee's first preset was released in May 2011. Presets are added regularly! The latest version of Klee available for download here on its webpage. Klee Features: * 100 preset-based sets; * Random sequence generation; * Custom preset ranges for step sequences and step settings; * Step Sequences; * MIDI clock and notes; * Pressing and releasing to steps is possible; * Export to step sequence to file; * Edit sequence positions; * Delete preset ranges; * Edit or remove the presets; * Export to MIDI file. Klee Presets: The Presets are divided in two categories: * Random presets * Custom preset ranges. "Random presets" are generated by randomly selecting from the available preset ranges. Each preset has it's own "generator function" and there are 100 available presets. The "generator function" is either a preset, a step sequence or a random step sequence. The chosen preset may only be used once. All other presets are available for editing. "Custom preset ranges" are preset ranges which have been created by setting up a pre-defined number of steps. "Custom preset ranges" are available for editing. All presets are sorted in 10 erasable sets, each with it's own customizable features: Step Sequence: Step sequences are formed by the following steps: 1. Create a sequence; 2. Select preset ranges and assign them to steps; 3. Press "step" to step into the preset ranges; 4. Save the

sequence to file and export it to MIDI file. Custom presets: Pre-defined presets are designed to make it easier for

Klee is a step sequencer with a world of sound! Using a minimal set of commands, play melodies using rich chord presets or create your own. Each track can have its own tempo, volume, and pan. The intuitive interface makes Klee easy to use, whether you're a beginner or an advanced musician. You control the Klee step sequencer with commands like 'Step' or 'Crescendo'. There are no menus or keyboard macros - you operate Klee with a mouse. And your computer keyboard is used to play notes, press buttons, and enter parameter values, rather than a MIDI controller. Features: MIDI input and output Drum kits Midi controllers Re-mapped piano Chord keyers Fast access of note range parameters Input and output for a variety of file formats Record and playback of audio Traffic Light (MIDI) Impressive GUI Sample archive Drum kits A drum kit is a collection of drum sounds (of various types) represented as a single MIDI controller. This controller can be assigned to play drum sounds and loops, to control drum fillers (stretches of multiple drum sounds, e.g. kick, snare and hi-hat) and to trigger drum tracks. A drum kit can be re-mapped using the Drum Kit Remapping settings. A drum kit is also a song instrument, similar to the

guitar, which, when selected in a song, plays a section of music and can be used to trigger loops. The drum kit can also be used to manipulate, send and receive MIDI data. For example, drum kits can be used to trigger drum fills and to control drum controllers, from within the song. Sample library All the samples in the sample library can be loaded into a song. They have been arranged by Klee's creators. The samples are arranged so that they can be played by drum kits. The samples are sorted by type: drum, percussion, percussion and chord, drum and percussion, synth, other, bells, chord and percussion, and others. If there is no available sample for a drum, percussion, or chord, one can be selected from the list. In order to load samples, a drum kit or an entry in the sample list can be selected. This is achieved by clicking the Load button on the right hand side of the steps section. If
