FastBackup is a robust and easy-to-use data backup tool. It allows you to backup multiple folders and to create restore points for your data. By using the backup and restore system, you can protect your data from hard disk crashes and damage caused by virus and malware. You can back up all of your data to an external hard drive or another computer, and you can schedule the backup process at a specific time. Review Detail By Unisys Version: 1.1.0.0 Upgrading to FastBackup 1.1.0.0 requires your existing data to be saved to disk (i.e. not in an active database). This means that you must back up your data to disk using a utility like FileAlarm on Windows, RoboCopy on Windows, Hard Disk Sentinel on Linux or a file copying tool on other operating systems before upgrading to FastBackup. If you have been backing up your files using the "Create Restore Point" feature in FastBackup, your restore points will not be available after upgrading to the new version of the software. See the Getting Started page for more information on backing up your data before upgrading to FastBackup. Review Detail By Cloud4World Version: 5.0 For a product that offers a quick, convenient and free alternative to the commercial solutions, this one is pretty good. For those who need a quick, reliable and free backup solution, FastBackup is for you. It gives a "zero" experience when you're using it. In fact, the majority of features are hidden, and only surface when you need them. For example, if you want to control the schedule, or the frequency of backup, you'll have to dig for it. But for a zero experience, it's pretty good. It's nice to have a tool that hides the complexity of the task you're trying to accomplish, and just helps you with it. P.S. With the subscription, this utility becomes more useful. For example, if you schedule a backup to run every 5 minutes, and something happens during the time, the utility will automatically back up your data to a restore point, and then bring the backup schedule back to normal. FastBackup Review Detail By Mirthgears Version: 2.0.0.0 FastBackup is my favorite backup application. The interface is easy to use, it has many backup options and I've never had an issue
