What's New in the?

----- Any Site Searcher is a small and very easy to use application that enables you to perform quick searches on Google, Bing or YouTube. This software is a very nice tool for everyone, as in this software you just have to type the thing which you want to search and then click any search engine service given below. Now as it is a BETA Release so we are giving only 3 services including 2 Search Engine (Google, Bing) and 1 Video Search (YouTube) Requirements: ----- You need to have Java 6 or later installed on your computer to use this software. Usage: ----- After installation, you can see the following screen once you click the blue button or icon. You can also switch among the search engines by clicking the corresponding box or icon. After switching the desired search engine, you can get the results by pressing the button or icon. ![Notes: ----- This plugin is a BETA release as of 16th of May 2013. It uses Google API v1 and Bing API v1. Currently, we are supporting only 2 Search Engines (Google and Bing). We are looking for better support for other Search Engines (Google, Bing, etc). Issues and Support: ----- You can post your support requests and issues on the forum. A support request can be submitted by using the help system provided by the IDE. Alternatively, you can use the ticket tracker for support requests and issues. We are continuously monitoring our forum. You can also subscribe to the mail notification from the forum. Credits: ----- This project uses Google API v1 as it supports 2 search engines (Google and Bing) and Youtube API v1 as it supports 1 video search. If you find any error or issue with this project please report it to us as it might be a bug or problem in Google API v1 or in our plugin. If you find any part or programming issue with our project you can also report it to us. We try our best to fix all the issues that we come across and this might take some time to fix it. Please report this issue with a proper description along with the steps that you performed so that we can fix it. Google API v1: ----- We are using the Google API v1 for getting the results. You can check the Java based API documentation for more information about Google API v1. * [Google API v1 Docs](* [Google API v1 Java
