MathSum Simple MathSum Simple MathSum for Windows Simple MathSum is a simple program that demonstrates a concept that has far-reaching applications and implications. It is an addition program that displays the output as an increasing decimal number starting with 0. As a person tries to add, it uses a pre-calculated value in place of a traditional "+" symbol. This behavior causes the interface to seem to be nothing more than a calculator. The numbers are generated by using the mathematical formulas: $x=y + x$ $y=x + y$

Examining the formulas and working out what the values of the variables x and y must be, one can use this program as a number generator. As one number is generated, it replaces the last previous number, ensuring that no number generated is ever a duplicate, and that all numbers generated will be on different lines. It is a useful demonstration of concepts including: 1) use of functions in the programming language 2) replacing or removing text in a program without having to use 3) changing the appearance of a program 4) use of user input or stored values in place of variables.

Image 1 of 2 ▼ In what is expected to be the last week of the Texas Legislature's short session, there are dozens of items left to be considered by lawmakers. Some of the most hotly contested include House Bill 11, which would allow some Texans to skip work while their child attends school, as well as Senate Bill 12, which would allow individuals who didn't receive a birth certificate after being born out of the country to be able to get one. Texas House Speaker Joe Straus and others are working to get both bills passed before the end of session, as opponents continue to rally against the two bills. Both sides have said they expect the special session to end on Saturday. Meanwhile, other business is still underway: State Rep. Joe Moody, D-El Paso, wants to ban "conversion therapy" for children as young as 13. The bill would ban the use of "counseling or the attempt to change an individual's sexual orientation or gender identity," under the state's Health and Safety Code. Conversion therapy has been criticized as a "pseudo-science" based on the idea that some people can change their sexual orientation and gender identity. The bill is just one of many HB 59 bills expected to come before the House of Representatives on the last day of the session.

Aging, learning and the sensory environment. Our review is based on our own experience of developing the sensory environment at the King's Dental Institute in London. The contributions of experts at the Institute, in particular Dr MacDougall and Dr Miller, have been invaluable and have provided the rationale for our recommendations. The theoretical background of the first part of this paper is taken from older studies on aging, learning, and sensory receptors. Our practical recommendations concern dental therapy, where we suggest that each tooth should have a 1-inch deep recess around its occlusal surface in which to place a handpiece and a toothbrush, and a similar recess around its mesial and distal surfaces.

[The role of "biodiversity" in the genesis of the rise of pathogenic bacteria]. The emergence of pathogenic bacteria and the interrelation of "biodiversity" and biological evolution are reviewed. The term "biodiversity" is used for a broad class of biological species, including genetic, phenotypic and ecological biodiversity. One of the major factors contributing to emergence of novel pathogens is ecological and evolutionary processes including mutation and recombination, in addition
