What's New in the?

Not exactly an Adobe mobile application, Samsung Theme Designer allows you to create themes for native Samsung mobile phones, running on the bada OS. Obviously aimed at Samsung developers' community, this authoring tool allows you to unleash your creativity and design personalized themes. Easy-to-use environment and extensive documentation The clean and intuitive interface provides easy access to features, allowing any type of user to create their theme with just a few clicks. Furthermore, the Quick Start Guide and the tutorial movie are there to assist you and help you understand how things work. Use integrated presets and preview projects Samsung Theme Designer can be used for creating themes compatible with touch or non-touch phones, as well as bada 1.x or 2.x

mobiles. Just take your pick and start designing the theme! The application comes with model specific pre-set information, so you do not have to worry about compatibility issues (such as the screen dimension). The navigation pane allows you to easily access phone menus and screens, while being able to preview the result of your changes at all times. Adjust appearance details and use templates You can make changes to every phone screen, customize the default wallpaper, change the menu icons and their size, as well as the color of every component (e.g. background, tabs, text, pressed text and buttons). Changing the idle and the locked screens is also possible and for bada 2.0 themes, you can even add images, animations and Flash content (SWF files). If you do not want to create

a theme from scratch, there are some templates available that you can modify according to your preferences. Create an app The program provides support for bada Flash Extension Services, which means you can transform your theme into a bada application, in order to interact with device-specific operations, such as controlling the phone vibrating feature, the power manager etc. Bottom line In conclusion, ease of use is one of the advantages of Samsung Theme Designer, allowing you to create Flash-enabled themes without having a vast experience in application design or developing. The computer's performance is not going to be affected as the resources necessary are insignificant, and the response time is good. FEATURES: • Create & customize

themes for bada phones • Create custom backgrounds for every bada phone, including multi-phone skins • Create new application icons & symbols • Quick start guides • Tutorial movies • Preview projects • Export your themes to the bada Flash Extension Services • Import your themes to the bada Flash Extension Services • Apply themes to your applications • Create and edit widgets for bada • In-App Flash Extension Service for bada 1.x or 2.x • Widgets for bada 1.

System Requirements:

Operating System: 64-bit Windows Vista, Windows 7, Windows 8, Windows 10 Processor: Intel Core i3, i5 or i7 Memory: 4GB or more Hard Disk Space: 50MB free space on the program installation directory Graphics: DirectX 9c compatible GPU DirectX®: 9c Other Requirements: Microsoft Visual C++ 2010 Redistributable or later version Included Components: Stability software package. Agency-specific version of ADS. Administ
