The first method of installing Adobe Photoshop is to purchase it online. After the purchase is complete, you need to download the file from the website and run it. If you are installing Photoshop from a CD or DVD, you need to open the DVD or CD and then open the installation file. Then, you need to follow the on-screen instructions to install the software. It is also the least expensive. The last thing that you need to do is to update the software. This will ensure that you get the latest version.

With the new version of Lightroom, you can now edit images on the iPad Pro. Since it was released a few days before my iPad Pro review, I wasn't able to take advantage of Lightroom on my Pro, but even in its infancy the iPad Pro and its Pencil have been essential for me.

Perhaps the biggest change in Lightroom 5 is the new Preview panel. The old panel viewed images in three visible modes. You can still view your images in a normal way, of course, and the new panel is there if you want it. However, the new panel is also viewable alongside a "Processing" mode. This has always been a feature in Lightroom, but in previous versions there was just one button for toggling between modes. Now, however, there is a small extra button that appears beside the "Processing" button when it is pressed.

The processing mode displays your image in a much more detailed view than the normal view. You can make changes to edges and visibility, and once you have finished, hit the "Processing" button again to toggle back to the normal view. The Processing panel looks like this:

The highlight brush is an interesting new way of redrawing portions of an image. The brush uses smart brushes, and you can use the cross-hair to draw or remove different areas of an image. You get more points of color to play with, and it's better than the old method of erasing and redrawing the same areas of an image.

The process is simple. Click on the image you want to highlight. Next, click on the "Brush" icon in the bottom right of the toolbar. In the main menu, select "Highlights" and then "Highlight Brush." From there, a list of images will appear. Simply select the areas of the image you want to highlight and then click OK.
