Photostand is an application designed for generating digital photo wallpapers. Many desktop-wallpaper generating applications are designed for specific operating systems. Others generate wallpapers automatically but cannot use your own photos. And some are designed for creating digital photo wallpapers, but they lack the ability to rotate and scale the pictures on your PC. Photostand is a great application for creating digital photo wallpapers, enabling you to set up a rotation interval for the wallpaper, and having the ability to use your own photos to make your desktop background. Features: – Supports.JPG,.GIF,.PNG, and.BMP photo files – Wallpaper can be set for a specific time or for a specific interval (customized for you) – Ability to pick photos from local folders, web directories, or remote FTP servers (subfolders are supported too) – Images can be selected randomly or in a sequential manner – A slider is used to adjust the selection ratio between local and remote photos – Rotation mode can be set to “landscape” or “portrait” (adaptive for both display orientation) – A slider is used to adjust the selection ratio between random or sequential photo selection – Wallpaper can be set for a specific time or for a specific interval – Ability to pick photos from local folders, web directories, or remote FTP servers (subfolders are supported too) – Images can be selected randomly or in a sequential manner – A slider is used to adjust the selection ratio between local and remote photos – Rotation mode can be set to “landscape” or “portrait” (adaptive for both display orientation) – A slider is used to adjust the selection ratio between random or sequential photo selection – Wallpaper can be set for a specific time or for a specific interval – A slider is used to adjust the selection ratio between random or sequential photo selection – Image search for keywords – Automatic synchronization of the folder with the one on the web – Desktop grid option – Save settings for later use – Ability to suspend the application – Wallpapers can be rotated – Automatic picture viewing – Drag pictures to desktop – Multiple pictures can be moved at once – Support Microsoft Windows XP, Vista, 7, 8, 8.1, and 10 – Ability to automatically change the desktop background for intervals – Rotation mode can be set to “landscape”

Use the KEYMACRO to activate macros easily without having to get up from your seat. Simply insert your keys into the keyboard and hit the macro button.
